PROFESSIONAL SUMMARY

Software engineer and Computer Science / Data Science student at Case Western Reserve University with three Amazon SDE internships (Ads and FinTech/business-systems teams) and CTO-level client delivery experience across healthcare, operations, and startup engagements. Builds backend systems, applied-AI and LLM workflows, data pipelines, developer tooling, and full-stack products — including seven published PyPI/npm/MCP packages, an MCP and LSP tooling ecosystem, a local-first portfolio command center, and a LaunchNY cohort venture. 4,968 GitHub contributions in the past 12 months across 18 public repositories. Available for full-time work immediately.

SKILLS

Languages: TypeScript, JavaScript, Python, Java, Go, Rust, Swift, SQL, R, MATLAB

Frameworks & Runtimes: React, Next.js, Node.js, Express, FastAPI, tRPC, Prisma, SQLAlchemy, Electron, Tauri, AppKit, Expo/React Native

Data & Infra: PostgreSQL, Supabase, SQLite, DuckDB, Redis, Docker, AWS, Row Level Security, pg_cron, Vercel, Railway/Render

Dev Tooling & Protocols: Model Context Protocol (MCP), Language Server Protocol (LSP), CLI design, ESLint plugin authoring, Git, CI/CD, GitHub Actions

Applied AI: Anthropic Claude, Gemini, VoyageAI embeddings, LLM extraction pipelines, hybrid vector/full-text retrieval (pgvector), agent evaluation contracts (Pydantic), prompt/eval design

Testing, QA & Observability: Playwright, Vitest, pgTAP, promptfoo, OpenTelemetry, Arize

Integrations: Stripe, Resend, PostGrid, Inngest, AssemblyAI, Clerk, fal.ai, Google Sheets/Apps Script, Railway

Spoken Languages: English (Fluent), French (Intermediate)

WORK EXPERIENCE

Forward Automations 2023 - Present

CTO

- Directs technical strategy and delivery across healthcare, operations, and startup client engagements.
- Delivered a Cleveland Clinic clinical-coaching MVP in 2 weeks for a regulated healthcare deployment.
- Built productivity software for a Cleveland architecture firm that increased operational output ~400%, deployed in under 5 weeks.
- Led an end-to-end legacy refactor for STEM Playbook, launching a stable application in 11 days ahead of a major live event.
- Developed AI marketing-automation tooling that cut production timelines ~90% and drove roughly 1.5M organic views for an a16z-backed startup client.

Deepr (a16z Portfolio Company) 2025

Technical Consultant

- Engineered an AI-powered photo-carousel content-generation system that drove a substantial increase in marketing viewership.
- Developed an inline coverage-vector tool giving engineers real-time testing-coverage awareness during code review.

Amazon 2023 - 2025

Software Development Engineer Intern

- Completed three SDE internship terms across multiple teams, including Ads and FinTech/business-systems environments.
- Built a data-analytics project delivering actionable hiring insights to business leaders and hiring managers.
- Contributed to customer process efficiency and testing-pipeline capabilities across distributed-systems infrastructure.

OPEN-SOURCE & PUBLISHED DEVELOPER TOOLING

Quality Runner

PyPI quality-runner v0.6.0. Repo-quality CLI and MCP server that runs proof-oriented checks across a codebase and emits machine-readable, evidence-backed findings plus an ordered remediation plan; read-only by design so agents/humans review evidence before acting.

ESLint Anti-Slop

npm eslint-plugin-anti-slop v0.5.0. Opinionated ESLint 9 flat-config plugin catching low-signal AI/code-review patterns (unjustified client components, placeholder copy, gradient text, weak empty states) before they reach production; ships a CLI (anti-slop check / anti-slop gate) for pre-merge enforcement.

Pre-CR Suite

npm @pre-cr/core and @pre-cr/server v0.1.0. Coverage-first pre-PR readiness tooling with an authored Language Server (LSP) so VS Code, Neovim, and a headless CLI share one changed-line-coverage evaluation instead of duplicating logic.

Agent Eval Contract

PyPI agent-eval-contract v0.2.0; validated v0.3.0 candidate staged on dev. Typed Pydantic contracts for evaluating AI-agent runs with consistent cases, rubrics, evidence, and result payloads.

Research Domain Writing (rdw)

PyPI research-domain-writing v0.1.0; validated v0.3.0 candidate staged on dev. Agent-first harness for research-grounded, claim-safe writing; validates structured research packets and emits exact prompt bundles across technical/music/basketball domains.

TMCP

Claude + Codex marketplace-distributed MCP/plugin package v0.5.7. Composable skill-packet workflows for expert audits, readiness reviews, routing policies, and agent handoffs; verified across GitHub Release assets, Codex and Claude Code marketplace installs, and MCP Registry publication.

Terrace

npm @jakyamos33/terrace v0.1.1; v0.2.0 release candidate staged on dev. Spec-driven, test-governed workflow CLI for AI-assisted development; enforces recoverable repo state, explicit spec intent, protected tests, and deterministic quality gates (ship check --json) for CI use.

Portable Agentic Workbench

public jakyamos-agentic-setup repository. Vendor-neutral context-management, workflow-routing, safety, evaluation, and durable-handoff contracts with a manifest-aware setup engine that preserves explicit dry-run/apply and public/private provenance boundaries.

Context Compiler Contract

public portable ESM validator package. Keeps AIOS context-compiler result and routing-manifest contracts independently testable while leaving source selection, ranking, receipt writing, and compilation runtime behavior with AIOS.

PROJECTS

Tenure LaunchNY Cohort Venture

Built a pilot-ready platform that turns specialist-led knowledge capture into reviewed SOPs, a permissioned organizational wiki, cited Q&A, and process intelligence reports. Implemented a Next.js/TypeScript and Supabase/PostgreSQL system with row-level security, transcription, LLM extraction, hybrid vector/full-text retrieval, and human review gates; pre-pilot hardening is underway.

Stack: Next.js, TypeScript, Supabase/PostgreSQL, Row Level Security, Inngest, AssemblyAI, Anthropic/Gemini/VoyageAI, pgvector, OpenTelemetry/Arize, Playwright/Vitest/pgTAP/promptfoo.

BidCamp Multi-Tenant Government-Contracting SaaS

Built a live closed-beta platform for MBE/MWBE firms with Claude-powered RFP analysis and proposal drafting, procurement intelligence, client and prime workflows, and human-reviewed weekly digests. Implemented multi-tenant Next.js and Supabase/PostgreSQL architecture with RLS, Stripe, Resend, PostGrid, scheduled jobs, and a GitHub scraping worker.

Stack: Next.js, TypeScript, Supabase/PostgreSQL, RLS, Stripe, Resend, PostGrid, Vercel, pg_cron, GitHub Actions.

Quality Runner Python CLI and MCP Server

Built and published a local-first quality orchestrator that compiles standards, detects available checks, normalizes evidence-backed findings, and writes versioned artifacts plus ordered remediation plans. Designed the read-only CLI/MCP workflow so agents and engineers can review evidence before making source changes.

Stack: Python, CLI, MCP.

AIOS Local-First Operating Layer for Agent Work

Designed a local-first operating system for agent work: session-lifecycle hooks capture events at session boundaries into a SQLite-backed event store. Built a project-memory model that separates raw automation artifacts from human-reviewed notes, treating Git repos as source of truth; documented as a public engineering case study.

Stack: Python, SQLite, Next.js.

CrimClock Legal Time Intelligence Platform

Built a neutral platform for procedural timing, sentencing, parole eligibility, custody impact, risk indicators, and plain-language explanations for legal and public-service audiences. Implemented explainable calculation outputs with statutes, rule configuration, exclusions, tolling, calculation steps, and disclaimer language. Product build / reviewer preview; never implies legal advice or established customer adoption.

Stack: Next.js, TypeScript, Tailwind, FastAPI, Python, SQLAlchemy, Alembic, PostgreSQL, Supabase, Vercel, Railway/Render, Docker, GitHub Actions.

Hoopscout Basketball Recruiting Intelligence

Built a coach-facing recruiting workflow for verified coach search, athlete profile review, coach-specific fit weighting, ranked school-fit signals, messaging, transcript controls, and trust operations. Implemented deterministic seeded private-beta flows with moderation controls and coach-specific evaluation weights across academics, shooting, production, size, geography, and readiness. Private beta.

Stack: Prisma, PostgreSQL, Next.js.

RemodelVision AI Remodeling Visualization and Estimation

Built a photo-to-visualization and rough-cost-estimation workflow using Claude vision and fal.ai image transformation services. Implemented a Next.js/TypeScript product with an agent coordinator, visual assessor, authenticated dashboard, uploads, model selection, and persisted project views. Core analysis and visualization paths work; full save flow and additional specialist agents remain incomplete.

Stack: Next.js, TypeScript, Supabase/PostgreSQL, Prisma, Clerk, fal.ai.

EliHealth Mobile Health and Recovery Data Product

Built a private, mobile-first health/recovery data product with authenticated data capture, lab imports, and human verification. Implemented Health Connect integration and explicit non-diagnostic boundaries throughout the product surface.

Stack: Expo/React Native, Supabase/PostgreSQL, Auth/RLS/Storage, Health Connect.

Chiron's Forge Live Multi-Model AI Research Product

Built a live applied-AI product that runs multi-model research, synthesis, independent judging, and refinement into skill files, research reports, and Cursor rules. Used as product/AI-workflow proof; hosts Framework Labs' Concordia reasoning engine in production. Site: chironsforge.com

Framework Labs Public Software Research Lab

Built a public software research lab producing standalone reasoning engines: Concordia (in production at Chiron's Forge) and Continuum (in production at Tenure Systems) are live; Praxis is in development. Site: frmwrklabs.com

Career-Ops Local Career Evidence and Application Command Center

Built and maintain a human-controlled local workflow that ranks verified roles, generates evidence-bound application artifacts, tracks freshness and outreach, and keeps public project proof claim-safe. Generated copy and queued roles remain review inputs, not submitted applications.

Pronto Local-First Portfolio Command Center

Built and validated a public v1 desktop command center for Git repositories, with repository and worktree discovery, structured quality evidence, CI-readiness signals, provider-neutral GitHub snapshots, and remediation/release preparation previews. Implemented a Tauri and React/TypeScript desktop surface with Rust and SQLite persistence, explicit repository/root scope, read-only refresh and provider boundaries, and audited blocked actions.

Stack: Tauri, React, TypeScript, Rust, SQLite.

Participant Deduplication Google Sheets Review Workflow

Built a container-bound Google Apps Script that finds fuzzy duplicate participant rows, gives reviewers explicit keep/delete decisions, and applies confirmed changes atomically with an audit trail. Kept matching and apply boundaries explicit: large-sheet matching runs through an owned Railway backend, review/apply stays in the spreadsheet sidebar, and participant data is not stored in the repository.

Stack: TypeScript, Google Apps Script, Google Sheets, Railway.

Soundscape [Full-Stack Music Social Platform](#)

Built a typed monorepo delivering ratings, discovery, a social feed, community concerts and blogs, mobile listening flows, shareable ranking cards, and provider integrations across web and mobile.

Stack: Next.js, tRPC, Prisma, PostgreSQL, Redis, Expo.

Dispatches from Cyberspace [Full-Stack Publishing Platform](#)

Built a full-stack publishing platform with authenticated authoring, draft/published workflows, revision history, comments, reactions, feeds, JSON Feed, sitemap generation, upload boundaries, and health/readiness checks.

Stack: TypeScript, Vite, Postgres, Clerk, Hono, Turbo.

Court Vision (Bball) [Basketball IQ Training Platform](#)

Built a basketball IQ training platform with lessons, daily challenges, draft/offseason simulations, and real-time flows.

Stack: React, Node/Express, Socket.io, Monte Carlo simulation.

BBDSE / CourtIQ [Basketball Analytics Research Suite](#)

Built a basketball-analytics research and product workspace covering player evaluation, roster tools, draft signals, lineup context, coach value, and a merged CourtIQ/Court Vision draft-room runtime; absorbed the former LaxDS pro-lacrosse analytics scaffold for reusable ingestion and modeling workflows. Public Vercel deployment paused on 2026-07-10; the GitHub repository remains public.

Stack: Python, R, Next.js.

Dsci-proj [OSS Issue-Resolution Modeling](#)

Built a reproducible survival-analysis pipeline plus a Next.js triage dashboard modeling GitHub issue-resolution risk across major open-source repos, with fixture-backed UI tests, CI, and deploy automation. Pairs with the CWRU Data Science minor.

Fantasy [Local-First Dynasty Fantasy-Football Intelligence App](#)

Built a local-first dynasty fantasy-football app with a trade engine, dashboards, draft room, and ingestion workflows.

Stack: FastAPI, React/Vite, DuckDB.

Portfolio [Personal Portfolio Site](#)

Built a personal portfolio site with project-truth sync, writing, film-room surfaces, and current-work signals.

Stack: TypeScript.

EDUCATION

B.A. in Computer Science

Case Western Reserve University, Cleveland, OH

Minors: Artificial Intelligence, Applied Data Science, Statistics | Available for full-time work immediately

LEADERSHIP & COMMUNITY

- President & Founder, CWRU Flea Market — recurring events averaging 600+ attendees and roughly \$7K in revenue per event.
- Vice President, App Developers and Innovators Club — technical development opportunities and collaboration programming.

AWARDS & HONORS

- Proclamation declaring "Jakye Amos Day," City of Buffalo (2023)
- Christine Davis Award (2023)
- Amazon Future Engineer Scholar (2022)
- National African American Recognition Program (2021)
